

187-1-110_B

This scanning electron micrograph (SEM) shows a large, irregularly shaped mineral specimen with a complex, crystalline surface. The specimen is light gray against a dark background. Several small, dark, circular features are visible on the surface. A scale bar in the bottom left corner indicates 100 μm. Four labels with blue dots point to specific locations on the specimen: 187-1-110_B (top left), 187-1-110_A-3 (middle left), 187-1-110_A-2 (bottom center), and 187-1-110_A-1 (bottom center, overlapping with A-2).
