

187-1-121\_1

This scanning electron micrograph (SEM) shows a large, irregularly shaped, light-colored flake or particle resting on a dark, textured background. The flake has a rough, fractured surface with some internal features. A small, circular, crater-like feature is visible on the left side of the flake. A small blue dot is located just below the label. The background is dark and covered with numerous small, bright, circular spots, possibly dust or other particles. A scale bar is present in the bottom left corner.
