

187-1-118\_1

This scanning electron micrograph (SEM) shows a large, irregularly shaped mineral specimen with a complex, crystalline surface texture. The specimen is dark gray against a black background. A small blue dot is located on the upper right portion of the specimen. To the left and right of the main specimen are smaller, partially visible fragments of similar material. A scale bar in the bottom left corner indicates a length of 100 micrometers.
